## Results of Statistics of Medical Care Activities in Public Health Insurance for 2023

The Ministry of Health, Labour and Welfare compiled the results of “Statistics of Medical Care Activities in Public Health Insurance” for 2023, and hereby releases them.

We prepare “Statistics of Medical Care Activities in Public Health Insurance” every year for the purpose of clarifying details of medical care activities, conditions of injuries/diseases, details of pharmacy dispensing activities, use of medicines, etc., concerning recipients of medical benefits under the health insurance system to obtain the basic data required for the administration of health insurance.

Among the receipts (health insurance claims of medical fees for medical care and dental care, and health insurance claims of dispensing fees for insured pharmacy) that were submitted to the prefectural branches of Health Insurance Claims Review and Reimbursement Services and the Federation of National Health Insurance Organizations, and then examined and determined as part of the examination for June 2023, this tabulation targets all of the receipts accumulated in National Database of Health Insurance Claims (NDB).

The results released in this tabulation are based on 87,602,058 medical care receipts, 19,837,566 dental care receipts, and 58,275,906 insured pharmacy receipts.

The number of receipts subject to the tabulation in 2023 increased by 6.5% compared to the previous year (the number in 2022 increased by 5.0% year on year). Refer to the reverse side for past percentage changes on previous year.
